WOLZNAUTIC

*since 1927*

## The evolution of ornamentation

Palace - Villa - Luxury Yacht

MARINE WOOD SOLUTIONS

*Decking & Interior*

## Solid wood decorative elements for indoor and outdoor floor surfaces

Decorative elements made from wood are known as decorative trims or veneer marquetry. Wolz Nautic offers a new solution made from solid wood which makes it possible to produce with the same precision as is the case with filigree veneer marquetry, for example. The innovation:

- Solid wood decorative elements
- Maximum production precision
- Intelligent expansion joint system

### Application areas

- Indoors and outdoors
- Villas, luxury yachts and other floor surfaces

### Service life and durability

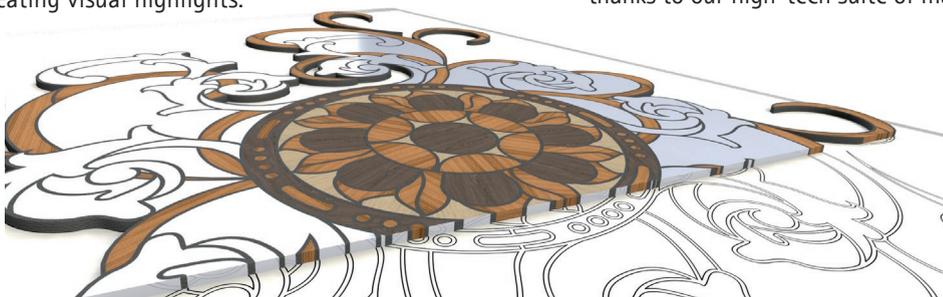

Wolz Nautic uses high quality materials for manufacturing the decorative elements; these materials have proven themselves in nautical applications.

Advantages compared to other solutions:

- Longer service life of the solid wood decorative elements compared to veneer solutions.
- Resistant to salt water and UV

### Combination with other materials

The combination with different raw materials (wood, stone and synthetic) means the solution from Wolz Nautic offers the possibility of achieving unusual designs and creating visual highlights.

### Care and spare parts management

Each component is provided with an individual code by means of innovative technology. The ability to exchange individual components is thus guaranteed in the long term.

Furthermore, a useful thickness of up to 12 mm means that the decorative surfaces can be refreshed several times over. As a result, sanding down can be performed in one pass with the teak deck sanding for example.

### Innovation by laser technology

Using laser technology in production enables Wolz Nautic to undertake filigree work right down to the tiniest detail. Implementing slender decorative elements and designs – such as those familiar from interior fixtures – is possible thanks to our high-tech suite of machines.

## About Wolz Nautic

For many years, Wolz Nautic has been synonymous with innovative potential, the utmost production quality, exclusivity and the „Made in Germany“ quality cachet.

The production methods and products we have developed and patented form the basis for the leading innovative position that we are permanently building on through our unstinting striving for perfection and the service potential offered by the market leader.

We regard our customers' most exacting requirements as the yardstick according to which we measure our service promise, and we focus on this aspect in our actions.
